### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in telephone interviews with Mr. William Hall, Reg. No. 14, 311 on Sept. 20, 2010 and Sept. 21, 2010.

The application has been amended as follows:

Please cancel claim 67.

Please amend claims 65, 69, and 77 as follows:

[claim 65] An apparatus for monitoring the operations of an operator of a medical imaging machine that performs a medical function when a patient is positioned for making an image of a body part, and said machine has taken an image of said body part, comprising:

- a computer for storing a first series of steps that an operator should perform when using said medical imaging machine to make said image,
- said computer also storing a second series of steps that the operator took when he or she used the machine to make an image of a body part of a human being,
- said computer comparing said first series of steps with said second series of steps; and

- said computer having an output based on the information developed from the differences between said first series of steps and said second series of steps.

[claim 69] The method of monitoring the operations of a human operator of a medical imaging machine in the taking of one or more pictures of a body part of a male or female patient, comprising:

- providing a computer having a memory,
- providing the computer with facilities for inputting information,
- providing the computer with facilities for outputting data,
- positioning of the body part of said male or female patient in the desired location for taking said picture,
- storing in said computer information representing at least two predetermined steps that said human operator should perform when using said medical imaging machine to take a picture of a body part of said male or said female patient,
- storing in said computer information representing at least two of the actual steps that said human operator did perform when using said medical imaging machine to take a picture of a body part of said male or said female patient,
- comparing, by the computer, said at least two predetermined steps with said at least two actual steps that were entered into said computer, and
- providing an output from said computer that was at least partially derived from said comparison.

[claim 77] An apparatus for monitoring the operations of an operator of a medical imaging machine to take a picture of a body part of a patient, comprising:

- a computer,
- said computer including means for storing at least two predetermined steps that an operator should perform when using said medical imaging machine to take a picture of a body part of a patient,
- said computer including means for receiving and storing at least two of the actual steps that the operator did perform when using said medical imaging machine to take a picture of a body part of a patient, and
- said computer also including means for comparing said at least two predetermined steps with said at least two actual steps entered into said computer and for outputting a result of said comparison.

***Allowable Subject Matter***

2. Claims 65-66,68-72,77 and 83-92 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding claims 65 and 77: The closest prior art of record Howson in view of Prince does not teach or fairly suggest a system/apparatus storing predetermined steps/operations to be performed by an operator operating a medical imaging to take pictures of body part, storing the actual steps taken by the operator in operating the

medical imaging matching; means for comparing and outputting the steps taken and the predetermined steps.

Regarding claim 69, the closest prior art of record, Howson in view of Prince, does not teach or fairly suggest a method of storing predetermined steps/operations to be performed by an operator operating a medical imaging to take pictures of body part, storing the actual steps taken by the operator in operating the medical imaging matching; and comparing and outputting the steps taken with the predetermined steps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Bautista, Cecilia L. ("Meeting the challenge of cost containment: a case study using variance analysis.") discloses issues of cost containment for medical image technicians.
